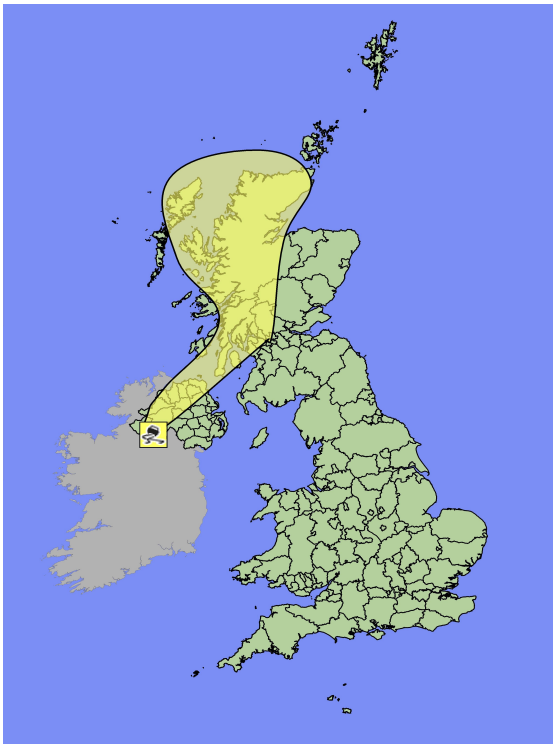
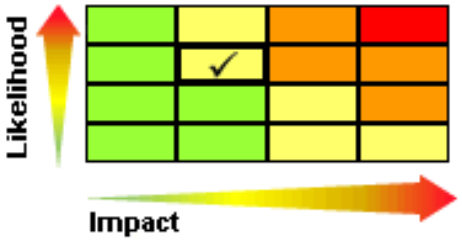
National Severe Weather Warning Service





Chief Forecasters Assessment
A cold westerly flow across Scotland and Northern Ireland will bring increasingly frequent showers across western parts in particular. Roads surfaces are likely to fall below freezing during the early hours of Sunday with the risk of widespread ice, but should rise above freezing again through Sunday morning.

The Met Office have issued a **Yellow Warning** of **Ice**

Valid from **03:00 on Sun, 04th Mar 2012** until **10:00 on Sun, 04th Mar 2012**

Showers will turn increasingly to sleet and snow overnight into Sunday morning across much of western and northern Scotland along with western parts of Northern Ireland. This will leave many surfaces wet or with slushy snow, leading to widespread ice over inland areas where surfaces are untreated. Across upland areas above 200m 5cm snow may accumulate, with possibly 10cm over Highland routes.
